EDICT OF GOVERNMENT

In order to promote public education and public safety, equal justice for all, a better informed citizenry, the rule of law, world trade and world peace, this legal document is hereby made available on a noncommercial basis, as it is the right of all humans to know and speak the laws that govern them.

EAST AFRICAN STANDARD

Dry whole peas — Specification
Foreword

Development of the East African Standards has been necessitated by the need for harmonizing requirements governing quality of products and services in East Africa. It is envisaged that through harmonized standardization, trade barriers which are encountered when goods and services are exchanged within the Community will be removed.

In order to meet the above objectives, the EAC Partner States have enacted an East African Standardization, Quality Assurance, Metrology and Test Act, 2006 (EAC SQMT Act, 2006) to make provisions for ensuring standardization, quality assurance, metrology and testing of products produced or originating in a third country and traded in the Community in order to facilitate industrial development and trade as well as helping to protect the health and safety of society and the environment in the Community.

East African Standards are formulated in accordance with the procedures established by the East African Standards Committee. The East African Standards Committee is established under the provisions of Article 4 of the EAC SQMT Act, 2006. The Committee is composed of representatives of the National Standards Bodies in Partner States, together with the representatives from the private sectors and consumer organizations. Draft East African Standards are circulated to stakeholders through the National Standards Bodies in the Partner States. The comments received are discussed and incorporated before finalization of standards, in accordance with the procedures of the Community.

Article 15(1) of the EAC SQMT Act, 2006 provides that “Within six months of the declaration of an East African Standard, the Partner States shall adopt, without deviation from the approved text of the standard, the East African Standard as a national standard and withdraw any existing national standard with similar scope and purpose”.

East African Standards are subject to review, to keep pace with technological advances. Users of the East African Standards are therefore expected to ensure that they always have the latest versions of the standards they are implementing.
Introduction

This standard has been developed to take into account:

— the needs of the market for the product;

— the need to facilitate fair domestic, regional and international trade and prevent technical barriers to trade by establishing a common trading language for buyers and sellers.

— the structure of the CODEX, UNECE, USA, ISO and other internationally significant standards;

— the needs of the producers in gaining knowledge of market standards, conformity assessment, commercial cultivars and crop production process;

— the need to transport the product in a manner that ensures keeping of quality until it reaches the consumer;

— the need for the plant protection authority to certify, through a simplified form, that the product is fit for cross-border and international trade without carrying plant disease vectors;

— the need to promote good agricultural practices that will enhance wider market access, involvement of small-scale traders and hence making farming a viable means of wealth creation; and

— the need to ensure a reliable production base of consistent and safe crops that meet customer requirements.

Dry whole peas — Specification

1 Scope

This East African Standard specifies the requirements and methods of sampling and test for dry whole peas of varieties (cultivars) grown from *Pisum sativum* L. and *Pisum sativum* var. *arvense* (L.) *Poir.* intended for human consumption.

2 Normative references

The following normative documents contain provisions which, through reference in this text constitute provisions of this East African Standard:

3 Terms and definitions

For the purpose of this East African Standard, the following definitions shall apply.

3.1 whole dry peas
threshed seeds of the garden type pea plant (Pisum sativum L. and Pisum sativum var. arvense (L.) Poir.).

3.2 damaged peas
whole peas that are sprouted, heated, shrivelled, damaged by insects, badly deteriorated or discoloured by weather or by disease, or that are otherwise damaged in a way that seriously affects their appearance or quality

3.3 defective peas
be weevil-damaged peas, heat-damaged peas, damaged peas, other classes, bleached peas, split peas, shrivelled peas, and peas with cracked seed coats

3.4 foreign matter
any extraneous matter than dry peas or other food grains comprising of

(a) "inorganic matter" includes metallic pieces, shale, glass, dust, sand, gravel, stones, dirt, pebbles, lumps or earth, clay, mud and animal filth etc;

(b) "organic matter" consisting of detached seedcoats, straws, weeds and other inedible grains etc.

3.5 poisonous, toxic and/or harmful seeds
any seed which if present in quantities above permissible limit may have damaging or dangerous effect on health, organoleptic properties or technological performance such as Jimson weed — dhatura (D. fastuosa Linn and D. stramonium Linn.) corn cole (Agrostemma githago L., Machai Lallium remulenum Linn.) Ákra (Vicia species), Argemone mexicana, Khesari and other seeds that are commonly recognized as harmful to health

3.6 shriveled peas
dry peas which are distinctly shrivelled in contrast to the natural shape and appearance of normally developed peas
3.7
splits
broken pieces of peas that are less than three-quarters of the whole seed, and cotyledons that are loosely held together by the seed coat

4 Quality requirements

4.1 General requirements

Dry whole peas shall meet the following general requirements/limits as determined using the relevant standards listed in Clause 2. Peas

a) shall consist of mature dry seeds of the garden type pea plant *Pisum sativum* L. and *Pisum sativum var. arvense* (L.) Poir.;

b) shall be well-filled, clean, wholesome, uniform in size, and shape;

c) shall be free from substances which render them unfit for human or animal consumption or processing into or utilisation thereof as food or feed;

d) shall be free from abnormal flavours, musty, sour or other undesirable odour, obnoxious smell and discolouration;

e) shall be free from micro-organisms and substances originating from micro-organisms, fungi or other poisonous or deleterious substances in amounts that may constitute a hazard to human health.

4.2 Specific requirements

4.2.1 Grading

Dry whole peas shall be graded into three grades on the basis of the tolerable limits established in Table 1 which shall be additional to the general requirements set out in this standard.

4.2.2 Ungraded whole peas

Shall be whole peas which do not fall within the requirements of Grades 1, 2, and 3 of this standard but are not rejected whole peas.

*Note: For Tanzania and Burundi this requirement shall not apply.*

4.2.3 Reject grade whole peas

Reject whole peas shall be peas which are musty, sour, heating, materially weathered, or weevily; which have any commercially objectionable odour; which contain insect webbing or filth, animal filth, any unknown foreign substance, broken glass, or metal fragments; or which are otherwise of distinctly low quality. The characteristics are not within the parameters specified in Table 1. They cannot satisfy the conditions of under grade whole peas and shall be graded as reject whole peas and shall be regarded as unfit for human or animal consumption.

### Contaminants

#### 5.1 Heavy metals

Dry whole peas shall comply with those maximum limits for heavy metals established by the Codex Alimentarius Commission for this commodity.

#### 5.2 Pesticide residues

Dry whole peas shall comply with those maximum pesticide residue limits established by the Codex Alimentarius Commission for this commodity.

Note: where the use of certain pesticides is prohibited by some Partner States, then it shall be notified to all Partner States accordingly.

#### 5.3 Mycotoxin limits

Dry whole peas shall comply with those maximum mycotoxin limits established by the Codex Alimentarius Commission for this commodity. In particular, total aflatoxin levels in Dry whole peas for human consumption shall not exceed 10 µg/kg (ppb) with B1 not exceeding 5 µg/kg (ppb) when tested according to ISO 16050.

### Hygiene

#### 6.1 Dry whole peas shall be produced, prepared and handled in accordance with the provisions of appropriate sections of EAS 39

#### 6.2 When tested by appropriate standards of sampling and examination listed in Clause 2, the products:

- shall be free from microorganisms in amounts which may represent a hazard to health and shall not exceed the limits stipulated in Table 2;
- shall be free from parasites which may represent a hazard to health; and
- shall not contain any substance originating from microorganisms in amounts which may represent a hazard to health.

7 Packaging

7.1 Dry whole peas shall be packed in suitable packages which shall be clean, sound, free from insect, fungal infestation and the packing material shall be of food grade quality.

7.2 Dry whole peas shall be packed in containers which will safeguard the hygienic, nutritional, technological and organoleptic qualities of the products.

7.3 The containers, including packaging material, shall be made of substances which are safe and suitable for their intended use. They shall not impart any toxic substance or undesirable odour or flavour to the product.

7.4 Each package shall contain Dry whole peas of the same type and of the same grade designation.

7.5 If Dry whole peas are presented in bags, the bags shall also be free of pests and contaminants.

7.6 Each package shall be securely closed and sealed.

8 Labelling

In addition to the requirements in EAS 38, each package shall be legibly and indelibly marked with the following:

i) product name as “Dry whole peas”;

ii) variety;

iii) grade;

iv) name, address and physical location of the producer/ packer/importer;

v) lot/batch/code number;

vi) net weight, in kg;

Note: EAC partner states are signatory to the International Labour Organizations (ILO) for maximum package weight of 50kg where human loading and offloading is involved

vii) the declaration “Food for Human Consumption”

viii) storage instruction as “Store in a cool dry place away from any contaminants”;

ix) crop year;

x) packing date;

© EAC 2011 — All rights reserved
EAS 759:2011

xi) instructions on disposal of used package;

xii) country of origin;

xiii) a declaration on whether the dry whole peas were genetically modified or not.

9 Sampling methods

Sampling shall be done in accordance with the EAS 79/ISO 13690.
