Disclosure to Promote the Right To Information

Whereas the Parliament of India has set out to provide a practical regime of right to information for citizens to secure access to information under the control of public authorities, in order to promote transparency and accountability in the working of every public authority, and whereas the attached publication of the Bureau of Indian Standards is of particular interest to the public, particularly disadvantaged communities and those engaged in the pursuit of education and knowledge, the attached public safety standard is made available to promote the timely dissemination of this information in an accurate manner to the public.

NATIONAL FOREWORD

This Indian Standard (Part 4) which is identical with ISO 11979-4 : 2006 ’Ophthalmic implants — Intraocular lenses — Part 4: Labelling and information’ issued by the International Organization for Standardization (ISO) was adopted by the Bureau of Indian Standards on the recommendation of the Ophthalmic Instruments and Appliances Sectional Committee and approval of the Medical Equipment and Hospital Planning Division Council.

This standard is published in ten parts. Other parts of this series are:

Part 1 Vocabulary
Part 2 Optical properties and test methods
Part 3 Mechanical properties and test methods
Part 5 Biocompatibility
Part 6 Shelf-life and transport stability
Part 7 Clinical investigations
Part 8 Fundamental requirements
Part 9 Multifocal intraocular lenses
Part 10 Phakic intraocular lenses

The IS/ISO 11979 series will supersede IS 14323 : 1996 ’Intraocular lenses — Specification’ and after the publication of this series of standards, IS 14323 shall be treated as withdrawn.

This standard contains requirements and guidance for the labelling of intraocular lenses and the information supplied with them. Labelling requirements for medical devices are given in order to ensure correct and necessary information to the ophthalmic surgeon. Some additional information is required for intraocular lenses. This information concerns technical and optical data as well as information about materials used.

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

a) Wherever the words ’International Standard’ appear referring to this standard, they should be read as ’Indian Standard’.

b) Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test, shall be rounded off in accordance with IS 2 : 1960 ’Rules for rounding off numerical values (revised)’. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.
1 Scope

This part of ISO 11979 specifies the labelling requirements for intraocular lenses (IOLs) and the information to be provided within or on the packaging.

NOTE This part of ISO 11979 attempts to harmonize the recognized labelling requirements for IOLs throughout the world. However, there might be additional national requirements.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 11979-1, Ophthalmic implants — Intraocular lenses — Part 1: Vocabulary

ISO 15223-1, Medical devices — Symbols to be used with medical device labels, labelling and information to be supplied — Part 1: General requirements

EN 980, Symbols for use in the labelling of medical devices

EN 1041, Information supplied by the manufacturer with medical devices

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 11979-1 apply.

4 Information provision

The general requirements for information provision provided with medical devices by manufacturers included in EN 1041 shall be taken into account.

5 Labelling

Table 1 lists minimal information that shall be included with the labelling of IOLs and whereabouts on the packaging it shall be given. Table 2 lists information that shall be given in applicable cases.
Table 1 — Information that shall be included with the packaging of IOLs

---

a  There are different systems in use with regard to primary container and additional wrapping(s). The information listed in the column is to be given on the appropriate component as to guarantee safe use and proper handling of the device.

b  In ISO 11607-1 and ISO 11607-2 “primary package” is now “sterile barrier system”; “storage container” is now “protective packaging”.

c  See definition of “manufacturer” in ISO 11979-1.

d  If a statement about sterility is made on the storage container, it is to read “contains (number) sterile IOL(s)”; if the storage container contains more than one IOL.

6 Package insert

The package insert, in the form of a leaflet or similar, shall be included in the storage container in such a way that it can be consulted without damage to the sterile packaging. It shall contain at least the following information.

a) name or trade name and address of the manufacturer;
b) detailed description of the lens including material(s) used;
c) method of sterilization;
d) conditions of storage and transport (if appropriate);
e) instructions for the removal of the IOL from the primary container;
f) instructions for use;

   NOTE European Directive 93/42/EEC as amended by Directive 2007/47/EC requires date of issue or the latest revision of the instructions for use for medical devices sold in Europe.

g) indication(s) of the circumstances under which the IOL can be used;
h) contra-indication(s) of the circumstances under which the IOL should not be used;
i) complication(s) that may occur;
j) warning not to implant the IOL if the container which maintains sterility has been opened or damaged;
k) warning not to re-use the IOL;
l) warning not to re-sterilize the IOL;
m) for multifocal and phakic intraocular lenses, a summary of the results of the clinical investigation, if any;
n) for multifocal intraocular lenses, a graph of the MTF (modulation transfer function) through focus response performance of the intraocular lens in the model eye, using the conditions described in Annex A of ISO 11979-9:2006; informative text shall accompany the figure explaining that the MTF values in the graph describe the lens’ optical performance in a standardized eye model at 50 c/mm as the focus is gradually shifted from that of a far object to increasingly near objects and that higher numbers indicate
better performance, and a graph of spectral transmittance through the lens in the range of 300 nm to 1 100 nm (see also ISO 11979-2);

o) for phakic intraocular lenses, recommendations for periodic evaluations after implantation, based on risk analysis and/or any clinical investigation performed, and a restriction in the indications for use if necessitated by the anatomical clearance analysis and clinical evaluation;

p) other appropriate warning(s).

7 Self-adhesive label

If supplied, a self-adhesive label shall contain at least the following information.

a) name or trade name of the manufacturer;

b) trade name and/or model designation of the product;

c) batch code or serial number (symbols may be used);

d) dioptric power;

e) add power (for multifocal IOLs);

f) overall diameter (may be indicated by the symbol Ø or in a drawing);

g) diameter of the body (minimum and maximum dimensions, if non-circular); this can be indicated in a drawing.

8 Use of symbols

Symbols can be used instead of text where appropriate. When symbols are used, ISO 15223-1 or EN 980, depending on region, apply.
Bibliography

Bureau of Indian Standards

BIS is a statutory institution established under the Bureau of Indian Standards Act, 1986 to promote harmonious development of the activities of standardization, marking and quality certification of goods and attending to connected matters in the country.

Copyright

BIS has the copyright of all its publications. No part of these publications may be reproduced in any form without the prior permission in writing of BIS. This does not preclude the free use, in the course of implementing the standard, of necessary details, such as symbols and sizes, type or grade designations. Enquiries relating to copyright be addressed to the Director (Publications), BIS.

Review of Indian Standards

Amendments are issued to standards as the need arises on the basis of comments. Standards are also reviewed periodically; a standard along with amendments is reaffirmed when such review indicates that no changes are needed; if the review indicates that changes are needed, it is taken up for revision. Users of Indian Standards should ascertain that they are in possession of the latest amendments or edition by referring to the latest issue of ‘BIS Catalogue’ and ‘Standards: Monthly Additions’.

This Indian Standard has been developed from Doc No.: MHD 05 (0165).
