Bureau of Indian Standards
AMENDMENT NO. 1 MAY 2003
TO
IS 4576 : 1999 LIQUEFIED PETROLEUM
GASES — SPECIFICATION
(Second Revision)

[Page 2, Table 1, Sl No. (ii), col 2, line 1] — Substitute 'Composition, liquid volume percentage' for 'Composition, liquid mole percentage'.

(PCD 3)
FOREWORD

This Indian Standard (Second Revision) was adopted by the Bureau of Indian Standards, after the draft finalized by the Petroleum Products Sectional Committee had been approved by the Petroleum, Coal and Related Products Division Council.

This standard was first issued in 1968. In the first revision, in order to restrict the production of LPG for present as well as for future refineries to a maximum vapour pressure, which is the design pressure of the existing LPG cylinders produced in the country, the vapour pressure of commercial butane-propane mixture had been changed to 16.87 kgf/cm², Max at 65°C from its present range of 10 to 20 kgf/cm². The present version (second revision) has been taken up as a result of review of this standard in the light of the present day requirements and availability of LPG in the country. In this revision characteristics for composition has been included and residue on evaporation has been deleted. Requirement for total volatile sulphur, hydrogen sulphide have been changed. Dryness has been replaced by free water content. Based on ISO 9162: 1989 requirement for vapour pressure has now been changed to 520, 1 050 and 1 550 kPa at 40°C, Max, respectively for butane, butane propane mixture and propane.

Taking into consideration the views of producers and suppliers of liquefied petroleum gases, fuel technologies and the interest of consumers, the Committee decided to relate this standard to the manufacturing practices followed in the country, keeping in view the need for international coordination among the principal standards in this field. Assistance has been derived from the following standards:

- DIN 51622-1973  Fluessiggas; propan, propylen, butan und und-butylen, anforderungen in die qualitaet (Liquefied gas; propane, propylene, butane and butylene, quality requirements). Deutscher Normenausschuss
- ASTM D 1835  Specification for liquefied petroleum (LP) gases

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS 2 : 1960 'Rules for rounding off numerical values (revised)'. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.
Indian Standard
LIQUEFIED PETROLEUM GASES — SPECIFICATION
(Second Revision)

1 SCOPE
This standard prescribes the requirements and methods of sampling and test for all types of liquefied petroleum gases commercially marked for household, commercial and industrial applications excluding automotive use.

2 NORMATIVE REFERENCES
The following Indian Standards contain provisions which, through reference in this text, constitute provisions of this standard. At the time of publication the editions indicated were valid. All standards are subjected to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below:

3 TERMINOLOGY
For the purpose of this standard, the following definition shall apply.

3.1 Liquefied Petroleum Gas (LP Gas or LPG)
The term applies to a mixture of certain light hydrocarbons derived from petroleum which are gaseous at normal ambient temperature and atmospheric pressure but may be condensed to the liquid state at normal ambient temperature by the application of moderate pressure.

3.1.1 LP gases mainly consist of one or more of the following hydrocarbons:
- a) Propane (C₃H₈)
- b) Propylene (C₃H₆)
- c) n-butane (C₄H₁₀)
- d) Iso-butane (C₄H₁₀)
- e) Butylene (C₄H₈)

3.1.2 Small quantities of one or more of the following hydrocarbons may also be present:
- a) Ethane (C₂H₆)
- b) Ethylene (C₂H₄)
- c) Pentane (C₅H₁₂)
- d) Pentene (C₅H₁₀)

4 TYPES
4.1 This standard specifies three types of LP gases, based on their principal constituent(s):
- a) Commercial Butane — A hydrocarbon product composed predominantly of butanes, butylenes or their mixtures.
- b) Commercial Butane — Propane Mixture — A hydrocarbon product composed predominantly of a mixture of butanes and/or butylenes with propane and/or propylene.
- c) Commercial Propane — A hydrocarbon product composed predominantly of propane, propylene or their mixtures.

5 REQUIREMENTS
5.1 The material shall comply with the requirements given in Table 1 when tested according to appropriate methods given in col 6 of Table 1.

5.2 Residue of LPG
Subject to agreement between the purchaser and the supplier, the material shall also pass the agreed limits of residue when tested according to IS 1448 [P:70].

6 PACKING AND MARKING
6.1 Packing
The material shall be packed in suitable cylinders/containers as agreed to between the purchaser and the supplier and subject to the requirements prescribed by statutory authorities in this regard (For cylinders, see IS 3196 and for comments, see IS 2825).

6.2 Marking
The cylinders/containers shall be marked as prescribed by statutory authorities in this regard. They shall bear the labels marked with the following information:
a) Name and type of the material;
b) Mass in kg of the material in the container;
c) Maximum vapour pressure in case of commercial butane-propane mixture only; and
d) Manufacturer's name and trade-mark, if any

6.2.1 Each cylinder/container shall also be marked with the caution label 'FLAMMABLE' together with the corresponding symbol for labelling dangerous goods [see Fig. 18 of IS 1260 (Part 1)].

6.2.2 BIS Certification Marking
The cylinder/container may also be marked with the standard mark.

ASTM test methods shall be followed till 'P' of IS 1448 methods under revision, are finalized.

NOTES
1 Vapour pressure may be determined at any other temperature and converted to 40°C by means of suitable vapour pressure-temperature graph. The same can also be determined by analyzing the gas by means of a gas chromatograph and then using the composition, the vapour pressure can be calculated at 40°C from the standard values of vapour pressures at various temperatures.
2 Each consignment of commercial butane-propane mixture shall be designated by its maximum vapour pressure in kPa at 40°C.
Further, if purchaser and the supplier agreed, the minimum vapour pressure of that mixture shall not be lower than 200 kPa gauge compared to the designated maximum vapour pressures and in any case the minimum for the mixture shall be not lower than 520 kPa at 40°C.
3 'Pass' test indicates Hydrogen Sulphide not more than 5 ppm.
4 Subject to agreement between the purchaser and the supplier, odour requirements of LPG may be changed for certain applications when unodourized LPG is required.
5 Product shall contain minimum 20 ppm ethyl mercaptan at the first despatching location to ensure the detection of odour.
To detect the odour, the following procedures may be adopted:
5 ml Doctor Solution + 8 ml Iso-octane + Pinch of sulphur powder in 25 ml stoppered cylinder. Shake and add 2 ml LPG (Aq). Shake slowly by releasing pressure.
Odour is adequate if sulphur turns yellowish brown.
P : 75 Odour test method may also be acceptable as an alternate method.
Bureau of Indian Standards

BIS is a statutory institution established under the Bureau of Indian Standards Act, 1986 to promote harmonious development of the activities of standardization, marking and quality certification of goods and attending to connected matters in the country.

Copyright

BIS has the copyright of all its publications. No part of these publications may be reproduced in any form without the prior permission in writing of BIS. This does not preclude the free use, in the course of implementing the standard, of necessary details, such as symbols and sizes, type or grade designations. Enquiries relating to copyright be addressed to the Director (Publications), BIS.

Review of Indian Standards

Amendments are issued to standards as the need arises on the basis of comments. Standards are also reviewed periodically; a standard along with amendments is reaffirmed when such review indicates that no changes are needed; if the review indicates that changes are needed, it is taken up for revision. Users of Indian Standards should ascertain that they are in possession of the latest amendments or edition by referring to the latest issue of ‘BIS Handbook’ and ‘Standards: Monthly Additions’.

This Indian Standard has been developed from Doc : No. PCD 3 (1705).
