Indian Standard

SPECIFICATION FOR
THE NATIONAL FLAG OF INDIA
(SILK KHADI)

(Second Revision)

0. FOREWORD

0.1 This Indian Standard (Second Revision) was adopted by the Indian Standards Institution on 17 August 1968, after the draft finalized by the National Flag of India Sectional Committee had been approved by the Textile Division Council.

0.2 This standard was first published in 1951 and was revised in 1964 with a view to changing over completely the dimensions in metric system subsequent to its adoption by the Government of India. In the revised standard the details of yarn for warp and weft of silk khadi bunting and of cotton khadi duck were deleted, the dimensions of hemp cordage and those of wooden toggles used for different sizes of flags were amended, and the \( \phi \)H value of the aqueous extract of bunting and tolerances on the dimensions of the flag and Asoka Chakra were prescribed.

0.3 The dimensions of flags specified in the first revision of the standard were the exact equivalents of the non-metric values specified in the first version of the standard. In the present revision, the dimensions of flags have been expressed in rationalized metric values. This opportunity has also been taken to amend:

i) method of attaching the panels of the flags: (a) in order to make the panels of equal widths on both sides of the flags; and (b) for positioning the Chakra, exactly in the centre of the white panel on both the sides; and

ii) tolerances on the dimensions of the flag and the Chakra.

0.4 This standard contains clauses 8.1, 9.3, 9.5 and 9.6(b) which calls for agreement between the buyer and the manufacturer.

0.5 For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test, shall be rounded off in accordance with IS:2-1960*. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

*Rules for rounding off numerical values (revised).
1. **SCOPE**

1.1 This standard prescribes the design, constructional details and other particulars of the National Flag of India made of hand-reeled and hand-woven silk khadi bunting.

2. **DESIGN**

2.1 The Flag shall be rectangular in shape and the ratio of the length to the width shall be 3:2.

*Note* — However, if required for special purposes, flags having length to width ratio different from 3:2, may be made.

2.2 The flag shall be a tricolour panel made up of three rectangular panels or sub-panels (*see Note*) of equal widths. The colour of the top panel shall be India saffron (*KESARI*), and that of the bottom panel shall be India green; the middle panel shall be white, bearing at its centre the design of Asoka Chakra in navy blue colour.

*Note* — Sub-panels are small pieces which are used to make up the width of the panel. In case of large-size flags, it often happens that the width of the cloth available is not sufficient for constituting a single panel; in such cases, pieces of cloth of smaller widths may be attached together to get the required width of the panel. The sub-panels shall be attached together by lapped seam with the raw edges turned in.

3. **MATERIALS**

3.1 **Silk Khadi Bunting**

3.1.1 *Yarn* — Hand-reeled silk yarn shall be used in the manufacture of bunting. The approximate count of yarn shall be as given below:

<table>
<thead>
<tr>
<th>Warp</th>
<th>5.6 tex (50 d)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weft</td>
<td>8.4 tex (75 d)</td>
</tr>
</tbody>
</table>

*Note* — To convert universal count, in tex, to denier multiply the universal count by 9.

3.1.2 *Cloth* — The bunting shall be woven on handlooms in plain weave. The particulars of bunting shall be as given in Table 1.

3.1.2.1 The bunting meant for manufacturing the top and bottom panels shall be bleached and dyed in India saffron (*KESARI*) and India green respectively and that meant for the middle panel shall be bleached. The dyed pieces shall be free from dyeing defects, such as uneven dyeing and streakiness.

3.1.2.2 The colours of the flag, that is, India saffron (*KESARI*), India green and navy blue, shall correspond, when visually examined in ordinary daylight to the colours in the sealed standard flag held in the custody of the Chief Inspector, Chief Inspectorate of Textiles & Clothing, Kanpur.
Note — Spectrophotometric values of the white, India saffron (KESARI), and India green colours in the flag presented to the Constituent Assembly on 22 July 1947 were measured by the then Technical Development Establishment Laboratory (Stores), Kanpur, using the illuminant C as specified by the International Commission on Illumination, 1951 and found to be as follows:

<table>
<thead>
<tr>
<th>Colour</th>
<th>Trichromatic Values</th>
<th>Brightness, Percent</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>X</td>
<td>Y</td>
</tr>
<tr>
<td>White</td>
<td>0.313</td>
<td>0.319</td>
</tr>
<tr>
<td>India saffron (KESARI)</td>
<td>0.538</td>
<td>0.360</td>
</tr>
<tr>
<td>India green</td>
<td>0.288</td>
<td>0.395</td>
</tr>
</tbody>
</table>

It is intended that the flags made to conform to this standard should have colours approximating as closely as possible to the colours as defined above. For all practical purposes, however, correspondence to the sealed standard flag shall be considered adequate.

For the purpose of controlling production, sample pieces of bunting dyed to the standard colours [India saffron (KESARI), India green and navy blue] may be obtained at nominal cost from the Indian Standards Institution.

3.1.2.3 The colour fastness ratings and other requirements of bunting shall be as given in Table 2.

3.2 Cotton Khadi Duck — used for the sleeve of the flag.

3.2.1 Yarn — The yarn used in the manufacture of duck shall be hand-spun from clean carded cotton. The approximate count of yarn for warp and weft shall be 38 tex × 3 (or Nm 26/3).

Note — To convert universal count, in tex, to metric count divide 1000 by the universal count.

*Method for determination of ends and picks per unit length in woven fabrics.

†Method for determination of weight per square metre and weight per linear metre of fabrics.

‡Method for determination of breaking load and elongation at break of woven fabric (by constant-rate-of-traverse machine).
3.3 Sewing Thread

3.3.1 Heavy silk sewing thread shall be used for all machine stitching. It shall be manufactured by twisting together in Z direction three yarns of pure thrown silk twisted in S direction. The colour of thread shall be the same as that of the panel on which it appears. The thread shall conform to the following requirements:

- Length in m/kg
- Breaking load on 60-cm test length, kg
  
<table>
<thead>
<tr>
<th>Length in m/kg</th>
<th>Breaking load on 60-cm test length, kg</th>
</tr>
</thead>
<tbody>
<tr>
<td>9060 Min</td>

</tbody>
</table>

3.3.2 For sewing hemp cordage inside the sleeve, sewing thread conforming to Variety No. 19 of IS:1720-1960* [27 tex \( \times 3 \times 3 \) (22/3/3)] shall be used.

3.4 Hemp Cordage

3.4.1 The cordages of various sizes shall conform to the requirements given in Table 4.

### TABLE 4 REQUIREMENTS OF HEMP CORDAGE

<table>
<thead>
<tr>
<th>Nominal Size (Circumference)</th>
<th>Number of Strands in the Cordage</th>

</tr>
</tbody>
</table>

*Linear density in kilotex \((k \text{tex})\) = the number of kilograms per kilometre.

3.4.2 Breaking load of the cordage shall be determined by the method prescribed in Appendix A.

3.5 Wooden Toggles

3.5.1 Wooden toggles shall be made from well-seasoned timber. Following species of timber are recommended for making the toggles:

<table>
<thead>
<tr>
<th>Trade Name</th>
<th>Botanical Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Haldu</td>
<td><em>Adina cordifolia</em> Hook.f.</td>
</tr>
<tr>
<td>Padouk</td>
<td><em>Pterocarpus dalbergioides</em> Roxb.</td>
</tr>
<tr>
<td>Shisham</td>
<td><em>Dalbergia Latifolia</em> Roxb.</td>
</tr>
<tr>
<td>Sal</td>
<td><em>Shorea robusta</em> Gaertn.f.</td>
</tr>
<tr>
<td>Teak</td>
<td><em>Tectona grandis</em> Linn.f.</td>
</tr>
</tbody>
</table>

*Specification for cotton sewing thread, bleached or dyed.
3.5.2 The size of wooden toggles used for various sizes of flags shall be in accordance with the applicable requirements of Table 5 (see col 10 to 14) with Fig. 1.

![Diagram of wooden toggle]

**FIG. 1 DETAILS OF WOODEN TOGGLE**

4. **FLAG**

4.1 **Size**—The finished flags of different sizes shall conform to the applicable requirements of Table 5 (see col 2 and 3) and shall be designated as that size. The other dimensions of flags, such as width of sleeve, depth of hem, hemp cordage and loop shall be in accordance with the applicable requirements of Table 5 read with Fig. 2.

4.2 **Asoka Chakra**—The Asoka Chakra shall preferably be screen printed, or otherwise printed or stencilled or suitably embroidered with navy blue colour embroidery thread conforming to Variety No. 7 of IS:1803-1961*. In all the cases, the Chakra shall be completely visible on both sides of the flag in the centre of the white panel.

4.2.1 The dimensions of the Asoka Chakra on different sizes of flags shall be in accordance with the requirements of Table 6 read with Fig. 3.

5. **CONSTRUCTION**

5.1 For all machine stitching, that is, stitching raw edges, attaching the panels, sleeve and corner pieces to the flag, etc, lock stitches shall be used. The number of stitchings shall be not less than 6 per centimetre.

5.2 The panels shall be attached by stitching them as shown in Fig. 2. A tolerance of ± 2 mm shall be permitted in the depth of lapped seam of the panels (which is 10 mm) (see section XVI of Fig. 2). Except along one of the widths, the raw edges along three sides of the flag shall be turned over twice and stitched to form a hem as shown in Fig. 2. The depth of hem shall be in accordance with the applicable requirement of Table 5 (see col 4). Along the other width, a sleeve (see 3.2) shall be attached.

*Specification for cotton embroidery thread, bleached or dyed.

---

**FIG. 3 DESIGN OF ASOKA CHAKRA**

5.3 Reinforcements — The four corners of the flag shall be reinforced with triangular pieces of bunting of the same construction and colour as is used for making the flags.

5.4 Sleeve — A sleeve shall be provided along that side of the flags where the raw edge has not been stitched. The width of the sleeve of flags shall be in accordance with the applicable requirement of Table 5 (see col 5), read with Fig. 2.

5.5 Hemp Cordage — A hemp cordage (see 3.4) shall be inserted in the sleeve of the flag and shall be hand stitched at three places, that is, top, middle and bottom of the sleeve as shown in Fig. 2. It shall have spliced-in
loops, one at the top for the toggle and the other at the bottom. The
dimensions of the cordage shall be in accordance with the applicable
requirements of Table 5 \((\text{see col 7 to 9})\).

5.6 **Toggle** — A toggle \((\text{see 3.5})\) shall be attached to each flag at the top
by splicing the hemp cordage around it before sewing the latter inside the
sleeve.

6. **SEALED SAMPLE**

6.1 All flags made to this standard, besides satisfying the requirements of
the standard, shall be in general conformity with the sealed standard
National Flag of India (silk khadi) held in the custody of the Chief
Inspector, Chief Inspectorate of Textiles & Clothing, Kanpur.

7. **MARKING**

7.1 Flags shall be marked on the sleeve with the following:
   a) Flag size No.,
   b) Length \times width in millimetres,
   c) Manufacturer’s name or trade-mark,
   d) Year of manufacture, and
   e) Any other information required by the buyer.

7.2.1 The flags may also be marked with the ISI Certification Mark.

**Note** — The use of the ISI Certification Mark is governed by the provisions of
the Indian Standards Institution (Certification Marks) Act, and the Rules and Regu-
lations made thereunder. Presence of this mark on products covered by an Indian
Standard conveys the assurance that they have been produced to comply with the
requirements of that standard, under a well-defined system of inspection, testing
and quality control during production. This system, which is devised and supervised
by ISI and operated by the producer, has the further safeguard that the products as
actually marketed are continuously checked by ISI for conformity to the standard.
Details of conditions, under which a licence for the use of the ISI Certification Mark
may be granted to manufacturers or processors, may be obtained from the Indian
Standards Institution.

8. **PACKING**

8.1 Flags shall be packed as agreed to between the buyer and the seller.

9. **SAMPLING AND CRITERIA FOR CONFORMITY**

9.1 In any consignment all national flags of the same size shall constitute
a *lot*.

9.2 The conformity of a *lot* to the requirements of this standard shall be
determined on the basis of tests carried out on samples selected from the *lot*.
9.3 Unless otherwise agreed upon between the buyer and the manufacturer, a certain number of flags depending upon the size of the lot shall be selected at random from the lot. The number of such flags shall be in accordance with col 1 and 2 of Table 7.

### TABLE 7 NUMBER OF FLAGS TO BE SELECTED FROM A LOT AND PERMISSIBLE NUMBER OF NON-CONFORMING FLAGS

<table>
<thead>
<tr>
<th>Number of Flags in the Lot</th>

<tr>
<td>3 001 and above</td>
<td>125</td>
<td>5</td>
</tr>
</tbody>
</table>

9.3.1 While selecting the flags from the lot, same number of flags, as far as possible, shall be selected from each package in the lot.

9.4 All flags selected as in 9.3 shall be tested for dimensions of flags, requirements of Asoka Chakra, construction of flags and size of wooden toggles.

9.5 For the purpose of determining requirements of cotton khadi bunting, colour fastness of dyed and printed pieces of bunting, pH value, shrinkage, requirements of cotton duck and sewing thread and the breaking load of hemp cordage, the method of sampling and determining conformity of a lot shall be as agreed to between the buyer and the manufacturer. The tests for these requirements may be conducted on the materials before fabricating the flags, or alternatively, sufficient quantity of the materials of the same quality as that which were used for manufacturing the flags shall be supplied along with the manufactured flags by the manufacturer for the purpose of these tests.

9.6 Criteria for Conformity — A lot shall be considered as conforming to this standard, if:

a) in respect of requirements enumerated in 9.4, the number of observed values failing to satisfy each of these requirements does not exceed the applicable number specified in col 3 of Table 7; and

b) in respect of requirements enumerated in 9.5, the criteria for conformity as agreed to between the buyer and the manufacturer is satisfied.
APPENDIX A
(Clause 3.4.2)

METHOD FOR DETERMINATION OF BREAKING LOAD OF HEMP CORDAGE

A-1. ATMOSPHERIC CONDITIONS FOR TESTING AND CONDITIONING OF TEST SAMPLE

A-1.1 The test shall preferably be carried out in standard atmosphere at 65 ± 2 percent relative humidity and 27° ± 2°C temperature (see also IS: 196-1966*).

A-1.2 Prior to test, the test sample shall preferably be conditioned in the standard atmosphere or the prevailing atmosphere where the test is to be carried out for 48 hours.

A-2. APPARATUS

A-2.1 The sample shall be tested on a constant-rate-of-traverse horizontal-type of rope strength testing machine (preferably power-driven) provided with two jaw grips. The distance between the two jaw grips shall be adjusted to one metre and the speed of the moving jaw shall be between 150 and 300 mm/min.

A-3. PROCEDURE

A-3.1 Fix a length of the cordage under test in the jaws of the machine. Apply a tension equal to 3 percent of the breaking load specified in Table 4 for the cordage of the corresponding size. Increase the load gradually and continuously until the specimen breaks. Read off the breaking load of the specimen.

A-3.2 Repeat the test with the remaining test specimens.

A-3.3 Calculate the average ($\bar{x}$) and the range ($R$) from the observed values of breaking load.

A-4. REPORT

A-4.1 Report the lot to be in conformity with the requirements of Table 4 in respect of breaking load, if the value of the expression $\bar{x} - 0.4R$ is greater than or equal to the specified minimum value.

*Atmospheric conditions for testing (revised).
INDIAN STANDARDS INSTITUTION

The Indian Standards Institution (ISI), which started functioning in 1947, is the national standards organization for India. Its principal object is to prepare standards on national and international basis and promote their general adoption.

The overall control of ISI, which is run and financed jointly as a non-profit making body by the Government and private enterprise, is exercised by the General Council, composed of representatives of Central and State Governments; leading trade, scientific and technological organizations; and subscribing members. The Union Minister of Industry is the ex-officio President of ISI.

The present technical activity of ISI is carried out through 8 Division Councils for Agricultural and Food Products; Chemical; Civil Engineering; Consumer Products; Electrotechnical; Mechanical Engineering; Structural and Metals; and Textile. All technical work relating to the formulation and revision of standards is done by committees appointed by and under the direction of their respective Division Councils. These committees consist of experts drawn from manufacturing units, technical institutions, purchase organizations and other concerned bodies.

To make available benefits of Indian Standards to the common man, ISI has introduced its Certification Marks Scheme under the Indian Standards Institution (Certification Marks) Act, 1952, as amended by the Amendment Act, 1961. According to this Act, quality goods conforming to Indian Standards can carry the ISI Certification Mark. This Mark is a third-party guarantee of quality of marked goods. Licences to use the ISI Certification Mark are granted to manufacturers using reliable methods of quality control subject to overall inspection by ISI.

In the international field, ISI represents India on the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC). ISO and IEC respectively link 54 and 40 countries, and function through 118 and 58 technical committees; ISI participates in 83 technical committees of ISO and all the technical committees of IEC. The committees and subcommittees of IEC and ISO for which ISI holds the secretariat deal with: Electric Fans, Lac, Mica, Pictorial Markings for Handling of Goods, Liquid Flow Measurements in Open Channels, Procedures for Inter-conversion of Values, Spices and Condiments, and Stimulant Foods.

INDIAN STANDARDS

Over 4,500 Indian Standards, broadly classified under the following main heads, have been issued so far:

- Agriculture & Food
- Chemical
- Civil Engineering
- Consumer Products
- Electrotechnical
- Mechanical Engineering
- Structural & Metals
- Textile

Of these, the standards belonging to the Textile Group fall under the following categories:

- Aircraft Textile Materials
- Carpets and Druggets
- Chemical Test Methods
- Cotton Fabrics, Handloom
- Cotton Fabrics, Mill-Made
- Cotton Hosiery and Knitted Garments
- Grading of Fibres
- Jute Bags
- Jute Fabrics
- Man-Made Fibre Fabrics, Handloom
- Man-Made Fibre Fabrics, Mill-Made
- Narrow Fabrics
- National Flag of India
- Packaging
- Physical Test Methods
- Ropes and Cordages
- Silk Fabrics, Handloom
- Sizing and Finishing Materials
- Spinning Machinery Components
- Terminology
- Textile Mill Accessories
- Twines
- Weaving Machinery Components
- Wool Fabrics, Handloom
- Wool Fabrics, Mill-Made
- Wool Hosiery and Knitted Garments
- Yarn and Similar Structures
