

Material by reference should be incorporated into the code since it is law and required to be followed by everyone; not just those who can afford to spend thousands of dollars every year to get continual updates. Additionally having this invisible paywall discourages individuals and entrepreneurs from innovating. Allowing material by reference to be incorporated into the code would more easily allow for greater quality of work. Due to the current situation a person using a code has to look at multiple references in multiple locations and verify that they are using the correct one. While it might be stated that this is part of their responsibility as a professional, streamlining and making any process more transparent ensures a greater quality of work which is in the public best interest.

Thanks,

Owen Crabtree, PE | Mechanical Engineer
