

It is unacceptable to me as a citizen that much of the Standards which are enforceable by law, and which regulate much of private industry, are unavailable to me due to excessive access fees and costs.

It is my opinion, and the opinion of many other individuals as you no doubt are aware, that if a material is to be held as legally binding in any way as the "Law of the Land" it must be freely and openly accessible to the people. Without this transparency a great hurdle will be set between the very few with much wealth and the very many without it.
