### Comment

Some of the crude from fracking is highly flammable and very dangerous. The best thing would be to leave it in the ground. If it must be shipped, it should be made no more dangerous than other fuels shipped. At an absolute minimum, the owner and/or shipper/carrier should be required to post a bond sufficient to cover any possible damage and loss of life. There have been several accidents involving this dangerous material in this country and elsewhere. I am confident that you are aware of them. If not, just ask and I will provide documentation.
