Comment

We have been unable to make maps/figures created in GIS accessible. We're also unable to make complex data tables accessible due to the inability to present information in a simple format (that is, the same number of column headers/rows). Unfortunately, the complexity of the data presented does not lend itself to the simple presentation layout required for accessibility. These tables sometimes have 50 or more columns, small font size, merged cells, and often run dozens of pages. Will these issues be addressed?
