Comment

The proposed rule completely leaves out an entire class of disabled people: the electrically hypersensitives. People with electrical sensitivities are increasingly denied access to hospitals, medical clinics, colleges, schools, government offices and many other places due to the wholesale buildout of wireless technologies.

There are technical, design and procedural means to accommodate our basic needs, but we need your help to get them in place.

It is not surprising that you choose to ignore us, since the TEITAC committee is stacked with special interests who see our very existence as a threat to their profits. I hope the US Access Board will take an honest interest in this issue.
