Comment

The current proposed rule Blowout Preventer Systems and Well Control, 1014-AA11 allows industry 60 days to provide detailed comments pertaining to; 1) The need for the proposed rule, 2) The impact of the rule relative to safety, operational efficiency and cost, 3) The technical merits, benefits and consequences, 4) Implications relative inconsistencies in regulations and API documentation and 5) Ability for BSEE and Operators to administer consistency in the request for information. Due to the complexities and consequences associated with this proposed rule, the request is hereby made to provide at least 120 days for comments to be prepared so there is less risk of needless prescriptive regulatory burdens placed upon Industry which the Regulators are not equipped to administer. This extension would require comments to be due no later than August 15, 2015.
