Re: Docket No. BSEE-2015-0002: *Oil and Gas and Sulphur Operations in the Outer Continental Shelf—Blowout Preventer Systems and Well Control* - Request for Extension of Comment Period

Via electronic submission to: <http://www.regulations.gov/>

Dear Director Salerno:

Cobalt International Energy, Inc. (Cobalt) requests an extension of an additional 120 days to the comment period associated with the Notice of Proposed Rulemaking referenced above. Several of Cobalt's highly experienced engineers are actively reviewing the proposed rule and engaging in industry discussions to inform the comments to be submitted by Cobalt. Based upon their preliminary review, we agree with the agency's assessment of that this rule "*represents one of the most substantial rulemakings in the history of the BSEE and its predecessor organizations.*"ⁱ The breadth and complexity of the rule is also reflected in the fact that the rule took four years for BSEE to write and another four plus months for the Office of Management and Budget to complete its procedural review required prior to its publication in the Federal Register.

An extension is necessary to allow Cobalt and the entire offshore industry the sufficient time needed to review the vast number of new and comprehensive requirements affecting multiple systems critical to well control operations proposed in this rulemaking so that informed and thoughtful input can be provided. It is therefore critical for a rule of this nature to undergo robust assessment of the potential impacts and feasibility of implementation. Unintended consequences of this proposed rulemaking could be significant, thus thoughtful consideration of each element is required to help ensure the intent of the regulation is achieved. In addition to reviewing the proposed regulatory action, BSEE has posed over 50 questions to Industry, seeking input on critical matters under consideration, including technology requirements that currently do not exist (e.g., requirement for "*technology capable of severing any components of the drill string (excluding drill bits)*"ⁱⁱ) as well as input on expanding of the proposed rule to cover operations beyond that currently being considered (e.g., RTM being "*required for all well operations, including shallow water shelf operations;*"ⁱⁱⁱ and, applying "*source control and containment requirements...to wells drilled in shallow water*"^{iv}). While the preamble of the rule may be viewed in its intent to serve as explanatory in nature, considerations posed in the preamble may in fact become requirements in the final rule if the Agency determines it receives substantial comments in support. The Agency noted in its comments issued with the release of the proposed rule its desire to implement the rule with severing capability of the BOP as a requirement. It is therefore critical

that adequate time be afforded Industry to thoughtfully respond to the Agency's request for information and feedback.

Cobalt is working with a number of industry groups to undertake a thorough and comprehensive technical review and plans to submit comments that will significantly aid in the creation of a robust and effective well control rule. Cobalt is committed to safe operations and supports effective regulations that will improve the performance of blowout preventer systems and well control operations. Cobalt believes that the comments from our experienced team, as well as those from our industry will be of significant value to BSEE if we are allowed adequate time to conduct a review that leverages Industry's expertise in each of the many areas touched by this proposed rule.

We therefore, respectfully request a response to our extension request of 120 days on or before May 15, 2015. If faced with insufficient time, we will have no choice but to prioritize our focus to those items that we can timely address and are deemed most critical. Limiting the time required for a complete and thorough review will likely lead to a rule that has unintended consequences and compromise the Agency's efforts to achieve its stated objectives.

Thank you for your consideration in this important matter.

Respectfully,

Lynne L. Hackedorn
Vice President, Government and Public Affairs
