Comment

As the mother of two children and a nanny to three more, the safety of children concerns me greatly. I want to see safety regulations regarding all products used by children held to the highest standards. I think it would be safe to assume that infant bath tubs are one of the few baby products used by almost every infant born here in the U.S. so it's important that we take great care in the production and labeling of these products. We need to make sure that everyone using these products knows and understands the concerns regarding the use of these products and the consequences of not using them properly.
