Mr. Len Morrissey  
ASTM International  
100 Barr Harbor Drive  
West Conshohocken, PA 19428

Dear Mr. Morrissey:

On behalf of the U.S. Consumer Product Safety Commission (CPSC) staff, I am writing to request that ASTM International coordinate the development of a new ASTM consumer product safety standard to address infant suffocation associated with inflatable air mattresses.

CPSC databases contain records of 16 infant deaths caused by positional asphyxia associated with air mattresses. These infants were placed to sleep on air mattresses which were not designed or safe for infant use. The majority of the infants were younger than 5 months old, and the oldest was 12 months old. Eleven incidents involved infants asphyxiated due to the softness of the mattress, which compromised their airways. Other infants were trapped in gaps formed between the mattresses and adjacent furniture. These incidents suggest that inflatable air mattresses may not be firm enough to allow a sleeping infant to maintain an open airway and that inflatable air mattress edges might form gaps more easily than other types of mattresses when placed close to walls or furniture.

CPSC staff believes that consumers may not perceive the hazard of using air mattresses with their sleeping infants. CPSC staff requests that a new ASTM national consensus safety standard be developed under the oversight of the ASTM F-15 Committee on Consumer Products. Potential strategies to address the hazard include on-product warnings and graphics, safety instructions, and packaging warnings.

* These comments are those of CPSC staff, have not been reviewed or approved by, and may not necessarily reflect the views of, the Commission.

Enclosed are: (1) a recent CPSC safety alert entitled, Air Mattresses Are Not For Infants, (2) a press release addressing hazards to infants associated with air mattress use, and (3) a list of potentially interested organizations which may wish to participate in the development of the standard. Please contact me at 301-504-7245 if you have any questions.

Sincerely,

[Signature]

Colin B. Church
Voluntary Standards Coordinator

Consumer Product Safety Alert
FROM THE U.S. CONSUMER PRODUCT SAFETY COMMISSION,
WASHINGTON, D.C. 20207

Air Mattresses Are Not For Infants

The U. S. Consumer Product Safety Commission (CPSC) is warning families nationwide that air mattresses are too soft for use with sleeping infants. Never place infants to sleep on air mattresses or other soft surfaces (such as water beds and adult beds), which are not specifically designed or safe for infant use.

Since 2002, CPSC has tragically received reports of 16 deaths, mostly infants younger than 8 months of age who were placed to sleep on air mattresses:

- 11 suffocated in a face down position on an air mattress.
- 5 died due to suffocation after falling into gaps between the mattress and bed frame and mattress and adjacent furniture or wall.

Generic twin-, full-, or queen-sized inflatable mattresses are usually intended for adults and older children. Even properly inflated air mattresses are usually too soft for infants to maintain a clear airway. Air leaks and under-inflation also contributes to incidents. Pay close attention to product warnings and assembly instructions.

Release #08-137

Deadly Danger: CPSC Urges Parents To Not Place Infants on Air Mattresses

WASHINGTON, D.C. - This is the season when homes fill up with gifts and guests. When traveling, parents may choose alternative sleeping environments for babies. The U. S. Consumer Product Safety Commission (CPSC) is warning families nationwide that air mattresses are too soft for use with sleeping infants. Never place infants to sleep on air mattresses or other soft surfaces (such as water beds and adult beds), which are not specifically designed or safe for infant use.

Since 2002, CPSC has received reports of 16 tragic deaths, mostly infants younger than 8 months of age who were placed to sleep on air mattresses: 11 suffocated in a face down position on an air mattress and 5 died due to suffocation after falling into gaps between the mattress and bed frame and mattress and adjacent furniture or wall.

Generic twin-, full-, or queen-sized inflatable mattresses are usually intended for adults and older children. Even properly inflated air mattresses are usually too soft for infants to maintain a clear airway. Air leaks and under-inflation also contribute to incidents.

Wherever your baby sleeps should be as safe as possible, CPSC recommends these safe sleeping tips:

- Always place your baby to sleep on his or her back to reduce the risk of SIDS.
- Never place baby to sleep on an adult bed. Infants can suffocate on bedding or can become entrapped between the mattress and bed frame or mattress and wall.
- When using a crib, make sure it meets current safety standards, has a firm, tight-fitting mattress and tight-fitting bottom sheet.
- When using a portable crib or play yard, be sure to use only the mattress or pad provided by the manufacturer.

Send the link for this page to a friend! The U.S. Consumer Product Safety Commission is charged with protecting the public from unreasonable risks of serious injury or death from more than 15,000 types of consumer products under the agency's jurisdiction. Deaths, injuries and property damage from consumer product incidents cost the nation more than $800 billion annually. The CPSC is committed to protecting consumers and families from products that pose a fire, electrical, chemical, or mechanical hazard. The CPSC's work to ensure the safety of consumer products - such as toys, cribs, power tools, cigarette lighters, and household chemicals - contributed significantly to the decline in the rate of deaths and injuries associated with consumer products over the past 30 years.
