---

Just finishing up my reading of Carl's missive. My favorite quote (tho lots to choose from...), has to be this:

"Indeed, the final ACUS recommendation represented a capitulation to some SDOs and their lawyers, to small minded bureaucratic thinking, to a business-as-usual mentality that cramps the development of a robust democracy that would best utilize new technologies to enhance justice, the free flow of information, and economic efficiency."

To support robust democracy, enhance justice, the free flow of information AND economic efficiency, all in one run-on sentence...! Is this a great country or what?
