This will be an interesting talking point for our discussions on the National Defense Authorization Act for Fiscal Year 2014.

Thanks. We knew that this was coming, based on conversations with our DOD contacts relative to the NDAA activities (the NRC report). I also understand that the DOD expects to issue a new policy on sustainable building design later this year, maybe in June or July.

Just learned of these yesterday at a local conference. I have not had a chance to study them very closely but you will see that they are based heavily on 189.1. I met some of the folks involved and will be reaching out to them.
