ERRATA SHEET FOR ANSI/ASHRAE/IESNA STANDARD 90.1-2007 (SI edition) Energy Standard for Buildings Except Low-Rise Residential Buildings

July 9, 2013

The corrections listed in this errata sheet apply to the first printing of ANSI/ASHRAE/IESNA Standard 90.1-2007, SI edition, identified on the outside back cover of the standard as "86149 PC 12/08". The shaded item has been added since the previously published errata sheet dated March 15, 2012 was distributed.

NOTICE: ASHRAE now has a list server for Standing Standards Project Committee 90.1 (SSPC 90.1). Interested parties can now subscribe and unsubscribe to the list server and be automatically notified via e-mail when activities and information related to the Standard and the User's Manual is available. To sign up for the list server please visit **Project Committee List Servers for Standard** on the Technology / Standards section of the ASHRAE website at http://www.ashrae.org/standards-research--technology/standards--guidelines/standards-activities/project-committee-list-servers.

Page(s) Erratum

11 **Section 3.2 Definitions.** On page 11 delete the following definition: (*Note: the standard does not include a definition for lamp wattage, rated and this term is not used in the standard.*)

rated lamp wattage: see lamp wattage, rated.

- 23 **Table 5.5-5 Building Envelope Requirements for Climate Zone 5 (A, B, C).** In the first column of Table 5.5-5 under the heading "**Fenestration**" change "*Vertical Glazing, % of Wall*" to read "*Vertical Glazing, 0% 40% of Wall*".
- 27 **5.5.3.3 Below-Grade Wall Insulation.** Change the first sentence in Section 5.5.3.3 as follows:

(Note: Additions are shown in <u>underline</u> and deletions are shown in strikethrough.)

5.5.3.3 Below-Grade Wall Insulation. *Below-grade walls* shall have a *rated R-value of insulation* <u>nonot</u> less <u>thanthat</u> the insulation values specified in Tables 5.5-1 through 5.5-8.

28 **5.5.4.2.1 Vertical Fenestration Area.** Change the Exception to 5.5.4.2.1 as follows: (*Note: Additions are shown in <u>underline</u> and deletions are shown in <u>strikethrough</u>.)*

Exception: Vertical fenestration complying with Exception (c)(b) to Section 5.5.4.4.1.

TABLE 6.8.1F Gas-and Oil-Fired Boilers, Minimum Efficiency Requirements. Change the size category (Input) for oil-fired hot water boilers as follows:
 (*Note: Additions are shown in <u>underline</u> and deletions are shown in <u>strikethrough</u>.)*

(See next page)

Equipment Type ^a	•• •••		Minimum Efficiency ^{b,c}	Efficiency as of 3/2/2010 (Date 3 yrs after ASHRAE Board Approval)	Efficiency as of 3/2/2020 (Date 13 yrs after ASHRAE Board Approval)	Test Procedure		
		<88 kW	80% AFUE	80% AFUE	80% AFUE	10 CFR Part 430		
	Gas-fired	≥88 kW and ≤733 kW	75% E _t	80% E _t	$80\% E_t$	10 CFR Part 431		
Boilers,		>733 kW ^a	80% E _c	82% E _c	82% E _c	10 01 1 1 1 1 1 1 1 1		
hot water		<88 kW	80% AFUE	80% AFUE	80% AFUE	10 CFR Part 430		
	Oil-fired ^e	≥88 kW and ≤733 kW	78% E _t	82% E _t	82% E_t	10 CFR Part 431		
		> <u>73388</u> kW ^a	83% E _c	84% E _c	84% E _c			

TABLE 6.8.1F Gas- and Oil-Fired Boilers, Minimum Efficiency Requirements

- 54 **TABLE 6.8.3 Minimum Pipe Insulation Thickness^a.** In the column titled "**Nominal Pipe or Tube Size (in.**)" change "(in.)" to "(mm)".
- 57 TABLE 7.8 Performance Requirements for Water Heating Equipment. The 2007 SI edition of Standard 90.1 incorrectly included the I-P version of Table 7.8. See Table 7.8 for changes (attached). Table changed to reflect SI units. (*Note: Additions are shown in <u>underline</u> and deletions are shown in <u>strikethrough</u>.)*
- 97 **Table A6.3 Assembly F-Factors for Slab-on-Grade Floors.** In the second set of values for both unheated and heated slabs (300, 600, 900, and 1200 mm) change the word "horizontal" to "vertical". See attached Table A6.3 for changes.
- 104 **TABLE A9.4C Effective R-Values for Fiberglass.** In the row titled "**Standard Thickness**, in." change "in." to "mm".
- 152 **Table D-3 International Climate Data** (*continued*). For China, Cangzhou, under the second column titled "Providence or Region" change "Municipalities" to "Hebei" and relocate this row (Cangzhou) to Table D-3, page 154, and place between "Baoding" and "Chengde" which are also located (and alphabetically listed) in Hebei.
- 173 **Informative Appendix F Addenda Description Information.** For Addendum "ad" in Table F-1, in the column titled "Description of Changes", change Section "5.3.1.1" to Section "5.5.3.1".
- 174 **Informative Appendix F Addenda Description Information.** For Addendum 90.1ak in Table F-1, in the column titled "Description of Changes", change Table "6.2.1G" to Table "6.8.1G".
- 183 **Section G3.1.2.9 System Fan Power.** Change the equation in Section G3.1.2.9 as follows: (*Note: Additions are shown in <u>underline</u> and deletions are shown in <u>strikethrough</u>.)*

For Systems 1 and 2,

 $P_{fan} = CFM_S \cdot 0.3$

For Systems 3 through 8,

 $P_{fan} = \underline{\text{input kW}}_{i} \frac{\text{Watts x 746}}{\text{Watts x 746}}$ / Fan Motor Efficiency

where

 P_{fan} = electric power to fan motor (watts) and

input kW_i = input kW_i of *baseline* fan motor from Table G3.1.2.9

Fan Motor Efficiency = the efficiency from Table 10.8 for the next motor size greater than the input kW using the enclosed motor at 1800 rpm.

 CFM_S = the baseline system maximum design supply fan airflow rate in L/s

183 **Section G3.1.2.9 System Fan Power.** Change the equation in Section G3.1.2.9 as follows: (*Note: Additions are shown in <u>underline</u> and deletions are shown in <u>strikethrough</u>.)*

For Systems 1 and 2,

 $P_{fan} = CFM_S \cdot \underline{0.64} \ \underline{0.3}$

183 **TABLE G3.1.2.9 Baseline Fan Power.** Change Table G3.1.2.9 as follows: (*Note: Additions are shown in <u>underline</u> and deletions are shown in <u>strikethrough.</u>)*

Change the title as follows:

TABLE G3.1.2.9 Baseline Fan Motor Power

For Constant Volume Systems 3-4 in column one change:

 $\underline{\mathbf{kW}_i = \mathbf{L}_{\mathbf{S}} \cdot 0.0015 + A$

For Variable Volume Systems 5-8 in column 2 change:

 $\underline{\mathbf{kW}}_i = \mathbf{L}_{\mathbf{S}} \cdot \mathbf{0.0021} + \mathbf{A}$

TABLE G3.1.3.7 Type and Number of Chillers. Revise Table G3.1.3.7 as follows: (*Note: Additions are shown in <u>underline</u> and deletions are shown in <u>strikethrough</u>.)*

 TABLE G3.1.3.7 Type and Number of Chillers

Building Peak Cooling Load	Number and Type of Chiller(s)				
$\leq \frac{1055 \text{ kW}}{11,148 \text{ m}^2}$	1 water-cooled screw chiller				
$> \frac{1055 \text{ kW}}{11,148 \text{ m}^2}, \\< \frac{2110}{22,296 \text{ m}^2}$	2 water-cooled screw chillers sized equally				

$\geq \frac{2110}{22,296}$ kW	2 water-cooled centrifugal chillers minimum
	with chillers added so that no chiller is larger
22,290 m	than 2813 kW, all sized equally

 Table 7.8

 Performance Requirements for Water Heating Equipment

	Unfired storage tanks	All		R-2.2	(none)					
a	Energy factor (EF) and thermal <i>efficiency</i> (<i>Et</i>) are minimum requirements, while standby loss (SL) is maximum W based on a temperature difference between stored water and ambient requirements. In the EF equation, V is the rated volume in $\frac{\text{gallons} \cdot \underline{\text{lit}}}{\text{gallons} \cdot \underline{\text{lit}}}$ and Q is the nameplate input rate in W.									
b	Section 12 contains a con	Section 12 contains a complete specification, including the year version, of the referenced test procedure.								
с	Instantaneous water heaters with input rates below 58.62 W must comply with these requirements if the water heater is designed to heat water to temperatures 82.2°C or higher.
